

Software Release/Development Engineer

If you are experienced in the definition, management and implementation of software product build and release, we'd like you to join our team as a **Software Release/Development Engineer**. The ideal candidate will have experience in large scale, cross language and cross operating system software build automation and installation. We offer generous compensation and an opportunity to further refine your skills working with other experts.

Responsibilities:

- Implement and maintain highly automated build and install process
- Lead application teams in adopting best practices of code management and traceability
- Support application deployment for complex projects including systems integration
- Assist with supporting source code management tools and automation builds
- Ensure proper management of the product release life cycle
- Look for opportunities to further improve the existing model
- Develop PL/SQL backend API for UI Apps product.

Requirements:

- BA / BS degree in Computer Science
- 3 to 5 years years of experience in automation build and release techniques
- Knowledge of Source Control Management tools such as CVS or PVCS
- Experience in Build / Process management
- Knowledge of Apache Ant
- Knowledge of Continuous Integration Tool such as Hudson, Cruise Control, or Continuum
- Proficiency in scripting such as Perl, Bourne, Korn, or C Shell
- Good concept of relational databases and SQL
- Knowledge of programming languages
- Detailed and process oriented
- Good verbal and written communication skills
- Excellent problem solving skills
- Excellent project scheduling ability
- Willingness and ability to drive collaborative efforts across the organization to improve product quality, reduce expense and increase productivity
- Ability to work in a team environment or independently
- Fluency in English
- Excellent verbal and written communication skills
- Excellent references
