

## **mPROJECTS TIME MANAGEMENT™**

*FAST, EASY, MOBILE PROJECT TIME MANAGEMENT  
FULLY INTEGRATED WITH ORACLE® TIME AND LABOR*

### **KEY BENEFITS**

- ✔ Supports your mobile workforce
- ✔ Increases profit by capturing every billable minute
- ✔ Tracks the real time consumed by non-billable tasks for use in future project planning and to identify areas for improvement
- ✔ No training required
- ✔ Supports DCAA Change and Late Audits feature in OTL
- ✔ Reduces time reporting errors and increases data timeliness
- ✔ Be ready to use mProjects Time Management in less than a day

### **FEATURES**

- ✔ Seamless integration with Oracle Time and Labor, Oracle Payroll and Oracle E-Business Suite Project Costing
- ✔ Intuitive interface requires no training
- ✔ Track time with the timeclock feature or enter manually
- ✔ Time can be entered from a smartphone, tablet, mobile device or browser

### **Overview**

mProjects Time Management™ enables time entry from a smartphone or tablet, with complete integration to Oracle® Time and Labor. mProjects Time Management offers the following features:

- ✔ Simple, intuitive time entry ability requiring no training.
- ✔ Fast, single touch action to save and submit timecards and retrieve next period data, ensuring ease of use and reducing errors.
- ✔ Supports employees wherever they are, even when out of wireless range or operating in airplane mode. Users can track time using their smartphone or tablet and save to the corporate network when wireless reception is available.
- ✔ Sophisticated default mechanisms, including templates and lists of values simplify time entry while ensuring compliance with Oracle Applications.
- ✔ Enter time manually or use automated timeclock functionality.
- ✔ Interfaces through Oracle Time and Labor (OTL) to Oracle E-Business Suite Projects to leverage full Oracle functionality and approval workflow.
- ✔ Leverages the Change and Late Audit functionality of Oracle Time and Labor to support Defense Contract Audit Agency (DCAA) requirements.

### **Easily Record Work as it Occurs for Greater Accuracy and Better Reporting**

The most accurate information is captured as it occurs, wherever that may be. Nothing is forgotten if it's recorded as it happens. With mProjects Time Management on their smartphone, tablet or internet browser, your workforce can enter their time and task comments whether they're in flight operating in airplane mode or in a remote location without cellular reception, as easily as when they're in a city or connected to a network. Time can be entered using templates and defaults with minor daily adjustments, or use the automated timeclock to record work as it happens. And because it is so easy to submit daily updates from a mobile device (smartphone, tablet, browser, etc.) managers can see labor overruns in their earliest stages and take proactive steps before problems arise.

### Intuitive Interface

mProjects Time Management utilizes an interface that any mobile device user will find intuitive and easy to use. Users designate Favorites to include only those projects, tasks and expenditure types that are relevant to their own work. A choice of time entry methods and timecard views allow each user to interact with the software in the manner they prefer, speeding end user adoption. Users can enter summary time information using a weekly view or add daily comments and details to their timecard - all from their mobile device.

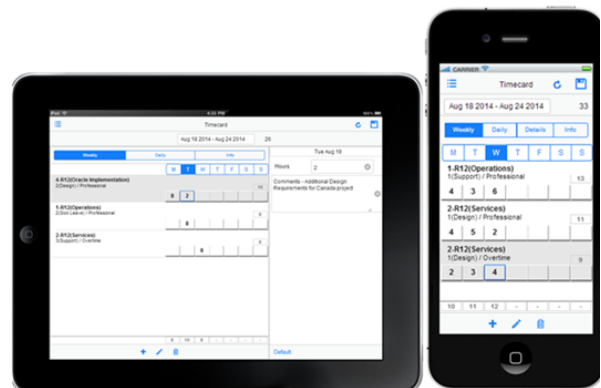

**Enter Time Manually or Use the Automated Timeclock**

### Fully Integrated with Oracle Time and Labor, Oracle Projects and Oracle Payroll

mProjects Time Management employs the standard and secure Oracle self-service access to Oracle Applications and calls public APIs available in Oracle Time and Labor to validate the time entries and save and/or submit them to OTL as if entered from Oracle's HTML interface.

Business rule validation is performed by OTL, so mProjects Time Management users can leverage standard Oracle Projects functionality such as project assignments and transaction controls. Standard Oracle process flows deliver full integration with Oracle Projects and Oracle Payroll. The mProjects software also sends timecards, project assignments, projects, tasks, and expenditure types (to be used in templates and as favorites) back to the mobile device so that users can work with their time entries offline and later submit to OTL when connected to a network.

**Maintain Your Time in the Format You Desire On Your Preferred Mobile Device**

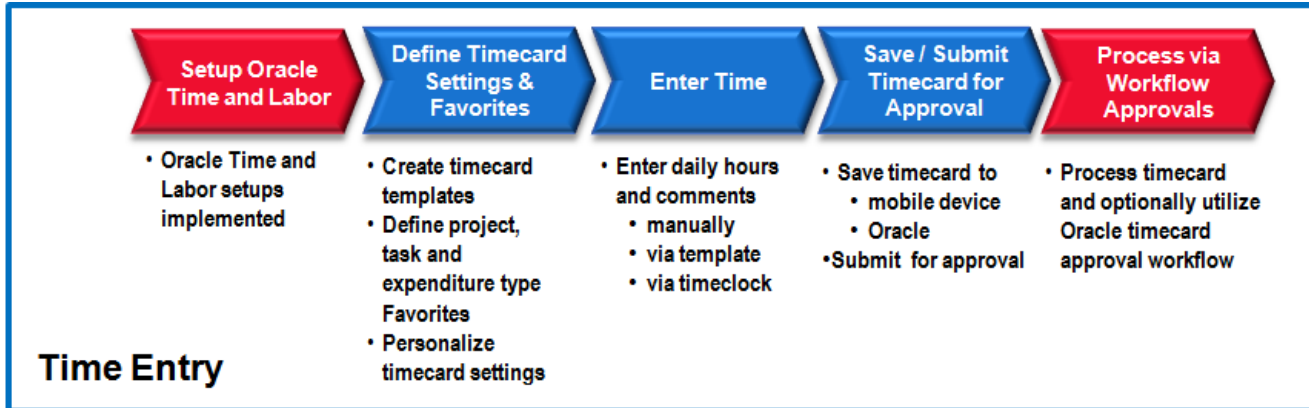

### Easy to Use, Individually Configurable and Requires No End User Training!

Getting started with mProjects is fast and simple. Business rules and timecard preferences are defaulted into the timecard settings so users can get started right away - or users can configure individual device settings such as template defaults, search options, time entry methods, etc. to best fit their time entry needs. Onboard user help is available right within the application which makes user adoption quick and easy! With mProjects, there is essentially no end user training required.

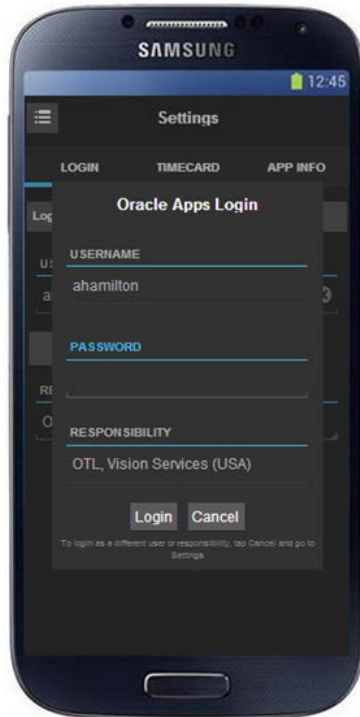

Get started today using mProjects by simply downloading the application from your mobile device store and requesting a free trial.

## mProjects Time Management Process Flow

 In mProjects     In Oracle

Enforces Oracle Security

### Secure, With Full Audit Trail

Because mProjects Time Management enforces standard Oracle Applications security, there is no need to worry about compromised data if a smartphone is lost. And users in the Defense Contracting industry will be glad to know that mProjects Time Management works with the Change and Late Audit functionality in Oracle Time and Labor to maintain a full audit trail as required by the Defense Contract Audit Agency.

### Hardware and Software Requirements

**Supported Platforms:** Most smartphone and tablet devices such as Apple, Android, Blackberry and Windows based mobile devices. Also compatible with browser based devices for Google Chrome, Internet Explorer, Apple Safari and Mozilla Firefox.
