Metropolitan St. Louis Sewer District
CASE STUDY

Experts in Oracle solutions migrate Oracle E-Business Suite to Oracle Fusion Cloud PPM and integrate it with Oracle Primavera P6 EPPM via OIC to enhance project transparency.

The Metropolitan St. Louis Sewer District (MSD) is a public agency whose responsibilities include the interception, collection, and treatment of wastewater, as well as stormwater management for over 525 square miles; encompassing all of St. Louis City and approximately 90 percent of St. Louis County.

MSD operates and maintains 9,790 miles of sewers ranging in age from less than a year old to 150 years old.

Challenge

Metropolitan St. Louis Sewer District (MSD) has been using Project Partners' OP3™ integration solution to transfer data between Oracle E-Business Suite (EBS) and Oracle Primavera P6 Enterprise Project Portfolio Management (Primavera P6 EPPM). In both cases, both Oracle applications were installed on-premises. While re-evaluating its business goals and project operational strategies, MSD identified that it needed to:

- Migrate its EBS instance to Oracle Fusion PPM Cloud.
- Keep its Primavera P6 EPPM solution on-premise.
- Integrate Oracle Fusion PPM Cloud with Primavera P6 EPPM.

Solution

Project Partners' OP3 integration solution was developed using Oracle Integration Cloud (OIC) service. The solution interfaces projects and related information from Oracle PPM Cloud to Oracle Primavera P6 EPPM (on-premise). Additionally, based on further evaluation, Project Partners developed an interface for creating/updating projects, WBSs, tasks, as well as codes and UDFs at the project and task levels.

© Project Partners, LLC

Outcome

- Project Partners migrated nearly 2000 projects from Oracle Fusion PPM Cloud to Primavera P6 EPPM in a live production environment.
- With the successful integration of Cloud PPM and Primavera P6 EPPM via the OIC/OP3 connector, projects and changes between the two applications are now regularly synchronized to reflect new projects and changes to existing projects.
